KANSAS CITY'S
BOTANICAL GARDEN

Champion Trees of Greater Kansas City

This list of the champion trees of Greater Kansas City dates back to 1955 when the late Stanley R. McClane, landscaping superintendent for the J.C. Nichols Company made the first survey. The list designated the largest known example of well over 100 species and varieties of trees in Jackson, Clay, Wyandotte and Johnson Counties. Chuck Brasher, arborist for Country Club Tree Service, renewed McClane's list in 1974 and maintained and enhanced it until his death in 2012.

In 2013 Powell Gardens made the offer to continue the list and make it a resource for the Greater Kansas City community. Area tree professionals provided input in how to make the list more meaningful to citizens and professionals alike. The current list includes the champion tree for each species and variety and runner up trees so that mature examples in various parts of the metro can be easily visited. The area has expanded to include current city limits beyond the four county region and all contiguous communities.

The list is valuable because it demonstrates the ultimate size of any tree in our region. It has been maintained for almost 60 years and some trees have remained on the list since its inception. This measurement over time provides valuable information on the growth and longevity of area trees. Large trees on the list represent species and varieties that withstood the test of time and our extremes of weather. They are proven well adapted to our region and good choices for a sustainable landscape.

Not all trees on the list are gigantic as some trees are naturally smaller, do not grow large in our climate or are new to cultivation in the region. Trees are measured by circumference in inches; height and spread in feet. The final score is the sum of 1 point for each inch of circumference (measured at 4 ½ feet up the trunk), plus 1 point for every foot of height, plus a quarter point for each foot of spread.

The list is inspiring on how many kinds of trees thrive in our community. Our heartland location allows trees to thrive from north, south, east and west. It also lists all those native to our local woodlands.

This list of Champion Trees of Greater Kansas City is a valuable resource to all communities in the metro and a way to map out where to observe the region's incredible tree diversity.
